

Quick Tie Walking Harness for Goats Not Trained to Lead

- 1) Place lead around goats neck and snap it back to itself.
- 2) Wrap the end of the lead around the goats girth right behind its front legs.

- 3) Bring the end of the lead up after placing behind the goats front legs and tie it back to itself.

- 4) Grab the lead between the neck and girth loops as though carrying a suitcase.

You will find that even the wildest goat will relax and struggle very little as their heads are free to turn whichever way they want. Just walk alongside the goat and steer it wherever you want it to go.
